

In recent times, Mars has intrigued people for more-substantial reasons than its baleful appearance. The planet is the second closest to Earth, after Venus, and is usually easy to observe in the night sky because its orbit lies outside Earth's. It is also the only planet whose solid surface and atmospheric phenomena can be seen by telescopes from Earth. No other planet has captured our collective imagination quite like Mars. It is like a cage waiting to be unlocked.

Dimensions: L60 x W60 x H42 cm

Primary Material: Paper

Primary Color: Multicolor

Customization: This product is not customizable.
